INSTALLATION INSTRUCTIONS

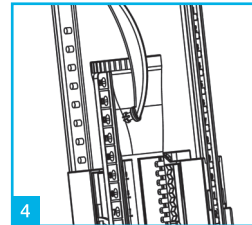

Push the two adjustment clips on the valve body simultaneously and insert the adjustment trestle into the slot. The height is adjusted by sliding the adjustment trestle up and down.

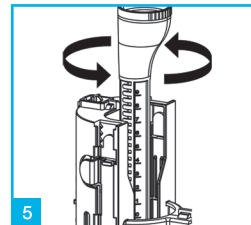

The height should be adjusted so the top of valve is 30mm below the cistern lid unless installing UNIBUTTON to fit 20mm hole were valve should be 10mm below the cistern lid.

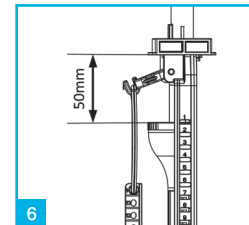

After adjusting the height of trestle, please ensure there is no obstruction to the connecting rod or pendulum rod. To remove any obstruction please cut connecting rod to suit.

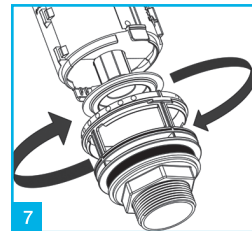

Ensure the connection rod naturally drops when the valve is in a vertical position, insert the connecting rod latch into the corresponding number on the pendulum rod.

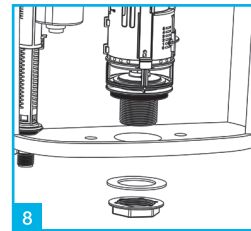

To adjust the overflow tube height, turn tube anti-clockwise and adjust up and down to the correct position. Turn clockwise to lock into place.

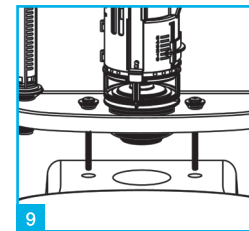

To ensure no interference with overflow tube and pendulum rod, make sure the gap in between bottom of connector body and top of overflow tube is not less than 50mm.

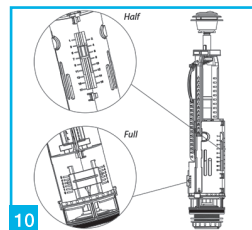

Choose the correct cradle size for the installation, 1 1/2" (factory fitted) or 2". To remove cradle twist and pull from the flush valve, to connect reverse procedure.

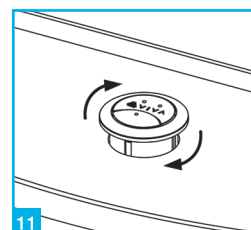

Insert the flush valve into the water tank and tighten to the tank using the washer and nut.

Replace or refit the doughnut washer and fasten the tank to the toilet with the bolt through kit.

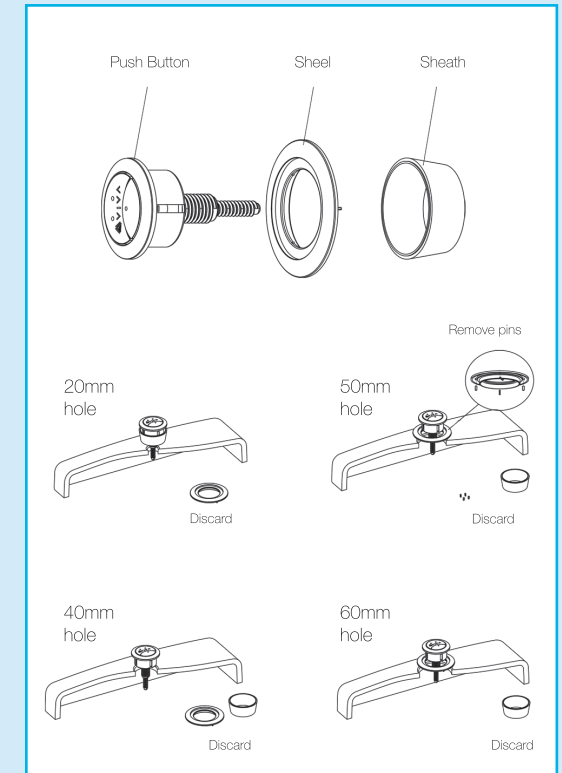

The flush volumes of both the full and half flush can be adjusted to suit your requirements. This is achieved by sliding the adjustment clips.

To install the button, place lid on cistern and screw button into the valve clockwise (see button guide for more information on hole sizes)

UNIBUTTON ASSEMBLY INSTRUCTIONS
